S-FIX
( $\epsilon$
easy installation in the original FAAC gate controllers

- easy programming
- superheterodyne radio receiver
with quartz-stabilized
reception frequency
- power from the control board
through the connector

S-FIX radio card is designed for FAAC gate controllers. It is compatible with DTM 433 MHz remote controls and almost all remotes operating in the KeeLoq ${ }^{\circledR}$ system

## S-FIX

(7) Basic parameters

> power supply: via gate controller
> maximum power consumption: 12 mA
> memory capacity: 35 remote controls with an individual number in memory. Remotes of DTM 433 MHz series and almost all remotes operating in the KeeLoq ${ }^{\circledR}$ system
> operating temperature (min./max.): $-20^{\circ} \mathrm{C} /+55^{\circ} \mathrm{C}$
> external dimensions $(\mathrm{W} \times \mathrm{H} \times \mathrm{H}): 51 \times 51 \times 20 \mathrm{~mm}$
> assembly method: through mainboard connector weight: 24 g
( Outputs
open collector outputs - OC
(type / quantity / maximum load): NO/2/50mA, channel 2 doubled with NO contact relay 1A/30V DC, led out on the screw connection
output operation mode / time: monostable/ $0,5 \mathrm{sec}$.
$\geqslant$
Radio parameters

> radio module: integrated, superheterodyne transmission security: $64-$ bit KeeLoqFunctionality
user interface: interface on two LEDs and two buttons
configuration of the remote: the ability to assign any of the two receiver channels to any button the ability to delete all memory: yes
the ability to delete a single remote control: yes, deleted remote control presence necessary
possibility to add the remote control
without access to the receiver buttons: yes, the function of easy remote adding - available only for DTM433MHz remotes
blocking the easy remote control adding function: yes
